

REACHING NEW HEIGHTS

Establishing itself as one of Sydney's premier designers, manufacturers and installers of aluminium windows, doors and window walls, AMA Windows + Glass Façades is reaching new heights with its involvement in the Opal Tower project at Sydney Olympic Park.

Opal Tower has 36-levels with 369 apartments plus ground floor commercial and retail spaces. By the time the project is complete in early 2018, AMA Windows + Glass Façades will have provided 22,000m² of glass and cladding, including window walls, commercial sliding windows and doors, slab covers, louvres, winter gardens and garden slot windows.

AMA Windows + Glass Façades Director, Andrew Con Micos said Opal Tower is an award-winning design for architects Bates Smart and makes an emphatic statement of how residential apartment buildings can make a beautiful and spectacular impact on the environment in which they are located. "The appearance of the building is greatly enhanced by window walls which give a three dimensional effect, through the use of vertical mullions offset at floors 4, 10, 16 and 26. AMA Windows + Glass Façades worked through the concept design with Bates Smart to bring the design to life."

Andrew said the façade colours change as you move around the building, much like the bark on a tree. This is our biggest design and construct windows and window wall project to date and we are very proud to be part of the team that is building this iconic tower."

AMA Windows + Glass Façades can trace its history back to Micos Aluminium which commenced in 1958. It now has state-of-the-art production facilities in the eastern suburbs of Sydney and, to ensure it is able to supply the volumes of quality products required by its expanding customer base, AMA Windows + Glass Façades has maintained this by its established production capacity in China.
